

The SUPRA range

Manual and automated assembly are both possible.

High-strength bolt, designed and manufactured by Mikalor specifically for the Supra range in 8.8 strength steel.

Revolutionary design which prevents nuts and trunnions from becoming dislodged.

Three or four spot-welds with protuberances guarantee an excellent response when high torque ratings are applied.

The swivelling bridge allows Supra Clamps to be opened up completely and helps to avoid deformation of the clamp during assembly.

All Supra Clamps are marked with the application range, material and the Mikalor logo.

Compliant with the DIN 3017-3 norm and with the directive EU 2002/95/EC.

Bevelled band edges to avoid damage to the hose or tube.
